

"Overrunning Alternator Decoupler" (OAD)

Some late model domestic and import manufacturers are now factory equipped with **O**verrunning **A**lternator **D**ecouplers (OAD).

They are also called "IDP" or "isolating decoupler pulleys".

An "OAD" pulley helps to synchronize the belt drive system for improved engine efficiency and reduced noise/vibration/harshness and increased component life. An "OAD" pulley features an internal spring and clutch system that absorbs the force associated with belt accelerations and tension reversals. This pulley allows the alternator to "free-wheel" or "overrun" when the belt suddenly decelerates.

Want To See Effect Of OAD Pulley Check Out This Video: http://www.youtube.com/watch?v=jKMf-_YI-AI

Never replace an alternator originally equipped with an "OAD" pulley with an alternator with a solid or clutch pulley. BBB remanufactures all alternators originally equipped with "OAD" pulleys with a new "OAD" pulley. Strict adherence to remanufacturing all alternators listed below with this type pulley is another example of BBB's commitment to their "Built to Higher Standard" philosophy.

FOR TOYOTA Car & Lt Trk
CAMRY
2.4L

Type ALTERNATOR
Mfr NIPPONDENSO
Voltage 12
Rotation CW
Amperage 100
Clock 2
Pulley SD7
Regulator I/R

Short Note

PONTIAC VIBE 2.4L 2009
TOYOTA CAMRY 2.4L 2007-09
TOYOTA COROLLA 2.4L 2009
TOYOTA MATRIX 2.4L 2009-10
7-GROOVE DECOUPLER PULLEY: 55mm

Long Note

This is a Denso Alternator for the 2007-On Toyota Camry, and 2009-On Toyota Corolla With the 2.4L Engine. This Unit Looks Identical to the 11034 Used Earlier, Except This Unit Uses a 7-Groove Clutch Pulley.

Part Numbers Remanufactured With NEW "OAD" pulleys.

11043, 11063, 11097, 11109, 11114, 11115, 11136, 11137, 11143, 11186, 11195, 11196, 11201, 11228, 11229, 11231, 11236, 11237, 11263, 11345, 11346, 11354, 11367, 11440, 11454, 12370, 12379, 13864, 13870, 13871, 13955, 13960, 13969, 13969CP
