

QUALITY ALTERNATORS

BBB Industries® remanufactures alternators with engineering and control processes similar to those used for new alternators.

BBB Remanufactures Over 4 Million Units Annually From Stockpile Of 600,000 Cores
BBB starts with OEM cores to assure units match what is coming off vehicle.

BBB's In-House Life Cycle Testing Assures Highest Quality Replacement Components
BBB produces OEM or BETTER quality throughout the product line.

BBB's Self-Contained Production Cells, Complete All Aspects Of Remanufacturing
BBB ensures consistent adherence to OEM or BETTER quality standards.

BBB Industries® has laboratory facilities to support engineering and quality testing of their products. All premium remanufactured alternators are "hot performance" tested to ensure they always meet OE-quality standards for their specific applications.

- Test at alternator RPMs (not engine speed RPMs)
- Verify current output & voltage for application
- Verify cut-in speed & minimum noise level (NVH)
